

Falcon M

GeaVet range

(Reference: 402122)

Presentation

FALCON M is a new formulation, very rich in amino acids, specifically designed to improve feathers during the moulting season of raptors.

It can be used as daily nutritional supplement during the moulting of numerous raptor species; regular use of FALCON M produces a better moult and reduces moulting time by about 3-4 weeks. FALCON M also contains all the essential vitamins and minerals falcons need to remain healthy during the stressful period of moulting.

FALCON M has also been used with success as a co-adjuvant in the treatment of skin diseases and many feather problems.

Alpha-alpha and fenugreek extracts (herbs to increase body growth and stimulate appetite) plus carnitine make FALCON M a good supplement for the growing chicks of many raptor species.

The fructo-oligosaccharides contained in FALCON M help to maintain beneficial intestinal flora such as *Lactobacillus spp.* and *Bifidus spp.*, reducing the potential risk posed by pathogens such as *E. coli* and *Candida albicans*.

Pack size

Box of 100 g.

Composition

Sugars: Dextrose, fructo-oligosaccharides, maltodextrin, rice starch.

Supplementation (per kg of product)

Vitamins: A (24000000 IU), D3 (10000 IU), E (10000 IU), K (400 mg), B1 (1000 mg), B2 (1600 mg), B6 (1600 mg), B12 (6 mg), C (170000 mg), H (80 mg), Pantothenic acid (3.000 mg), Folic acid (500 mg).

Amino acids: L-arginine (6000 mg), L-lysine (5000 mg), L-choline (2500 mg), L-methionine (3000 mg), L-histidine (1400 mg), L-leucine (3000 mg), L-isoleucine (1200 mg), L-phenylalanine (1700 mg), L-threonine (3000 mg), L-cystine (2000 mg), L-valine (1700 mg), L-tryptophan (1400 mg), L-tyrosine (2000 mg), L-carnitine (10000 mg).

Minerals: Calcium carbonate (12000 mg), copper (50 mg), iron (1000 mg), cobalt (40 mg), iodine (100 mg), zinc (500 mg), manganese (100 mg), magnesium (900 mg), selenium (10 mg).

Herbal extracts: Alpha alpha (20000 mg), fenugreek (30000 mg).

Instructions

Suggested dose: use half a measuring spoon (1 gram) of the product per kilogram of body weight in food (eviscerated prey) during moulting.
