NutriBird P15 Tropical

Versele Laga range

(Reference: 403122)

Presentation

NutriBird P 15 Tropical is a balanced complete maintenance food for parrots. The pellets have a scientifically approved composition, based on selected grains, fresh fruit and peanuts. Completely consumable, no waste. Contains Florastimul, which supports the intestinal flora and protects against intestinal disorders.

Recommendations

If your bird is not used to pellet food, the switch to this new type of food must be made gradually.

Pack size

Bag of 10 kg (Ref. 403122)

Composition

Cereals, seeds (min. 10 % groundnut (peanut) kernels), fruit (min. 5 % fresh fruit), vegetable protein extracts, derivatives of vegetable origin, sugars, minerals, L-lysine, methionine, yucca schidigera extract, fructo-oligosaccharides, vitamins, trace elements.

Crude protein	%	15
Crude fat	%	16
Crude fibre	%	3,50
Crude ash	%	6,50

Instructions

Switching to NutriBird food in pellet form:

1. Preparatory phase: as far as the smaller bird species are concerned (canaries, tropical and European finches, budgies), it is recommended to begin by preparing them for the switch. The aim is not to force the birds to eat pellets during this preparatory phase. They are just taught to recognize pellets as one of the elements of their food. For 2 or 3 weeks, they will be given the normal mixture of seeds to which 10 % of pellets will have been added. For large parakeets and parrots, this preparatory phase is not necessary.
2. The switch itself : During the switch-over period, seeds and pellets will no longer be mixed. The birds only receive pellets during the whole period. Some days, following the schedule below, they will still be given a bowl containing seeds which they will eat as much of as they want. But the periods during which the birds only receive pellets will become longer and longer so as to oblige them to consume more pellets. "Seed days" will be introduced into the schedule to prevent the birds losing too much weight. During these days, the birds will be able to recover any energy they may have lost during the "pellet days".
